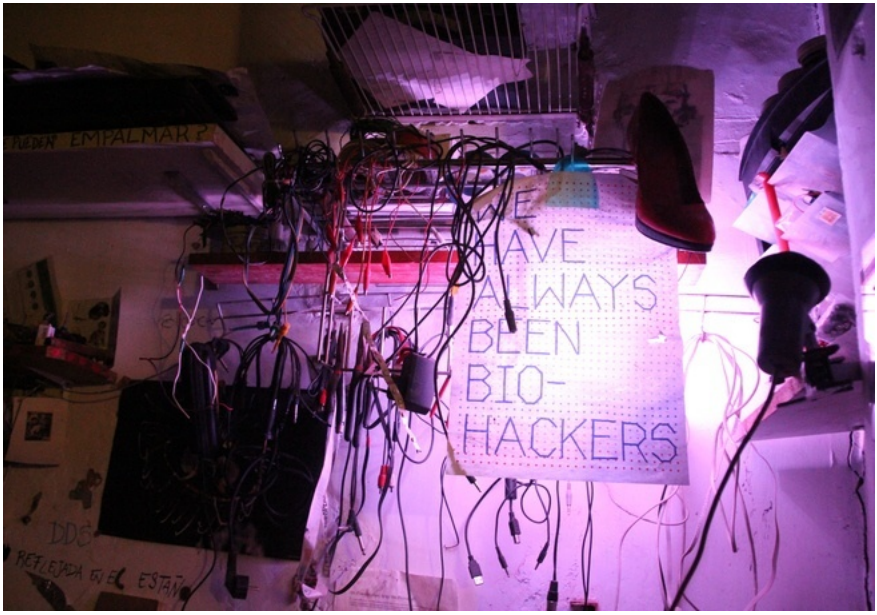
2.1 Part 1
2.2 Part 2 Amplified Matter
2.3 Part 3 from Biopolitics to Biotranslab



** IMPLEMENT BY EXPANDING MATTER

Now that you have the DIWO microscope in your hands, you can contemplate - with emotion - the Biota / Vaginal Flora ecosystem that lives in a symbiotic relationship with your organism.

the idea of seeing ourselves contemplating, expanding, analyzing and reverting capitalocentric logics excites me...

Welcome to the pussyinsight expanded, down with the anthropos, incomplete and reductionist logic ...
look, love, dream your being, discover with us and use the tools ...

join the debauchery of autonomy understood as self-governance enjoy failing you're not alone, there is no rush the weapons won't attack anyone, they will be there to understand us **in a kind of quantum chaos** that **acts as a disturbance of the norm.**

is **autonomous** bio.electro.chemistry lab:

BIO TRANS LAB

wants us to be together, moving like uncertain transients, **becoming WITH matter that trans.forms us** de.codes.

de.humanizes, to

understand that we are

not limited by the skin,

the pores, the holes,

not permeable,
ultra permeable

let's leave the word, go to the gesture, to the disturbed action, conscious

and act together
by training WITH

** IN SYMBIOSIS WITH YOUR BIOTA~ VAGINAL FLORA

WITH this quantum moment space-time matter, I would like to become aware of the importance of grasping through a bionic eye that allows us to project an intrinsic part of our ecosystem.

The **amplification of the vaginal flora** as a tool for the self-governance of our pussy, is only a moment, a material part of the unbridled beginning that the alliances established with our flora and that will expand into strange phenomena, a journey to the depths of our being WITH

VAGINAL FLORA
is the group of microorganisms that inhabits your pussy, in its majority almost 90% are lactic bacteria, by cultivating them you can make your own yogurt,
Yogurtssy

well, the vaginal flora **also known as biota** is composed of **vaginal fluid and microorganisms** that **live in a symbiotic relationship** with the bag of cells that we refer to as Human.

It known that anti.biotics destroy both good and bad bacteria, they will destroy Escherichia coli and good lacto bacilos and your vaginal metabolism will be fucked after its consumption, precisely these anti.everything kill our beloved pH regulator the lactic bacteria or lactobacillus, when she dies,,, other microorganism that inhabit it in symbiosis begin to proliferate excessively and ultimately parasitize us since they are potential pathogens invaders in this unregulated system.

leading to the appearance of Bacterial Vaginosis (gardnerella) or of Candidiastic Vaginitis (candida albicans fungus)

It is important to know that during puberty and with the exuberant production of estrogens, there is a large number of lactic bacteria/lactobacillus, through their fermentative metabolism, they generate organic acids and H20 that eliminate contaminants and control the proliferation of bacteria of the already mentioned pathogens Gardnerella and Candida.

Lactobacillus

Have a strictly fermentative catabolism in which the final product after the degradation of sugars is lactic acid.

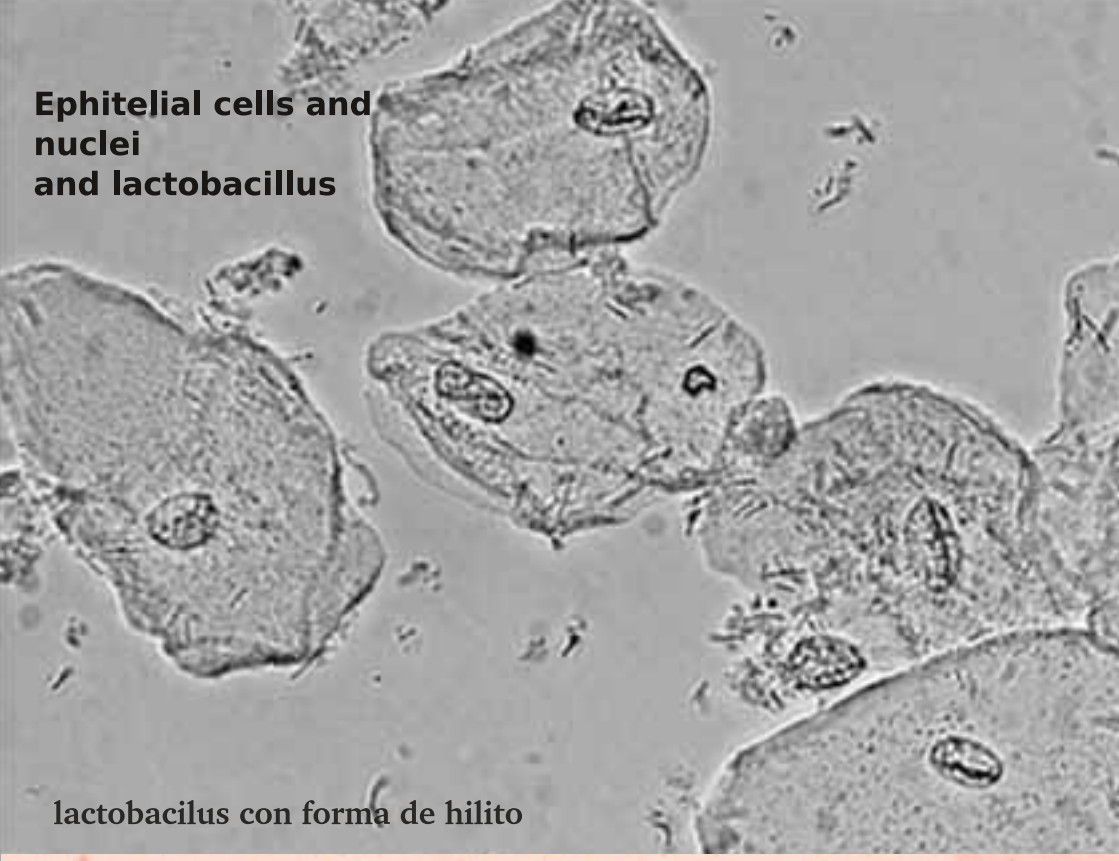
There are more than 10 different species in the habitat composed of:

1. plant material)(prebiotics?
2. internal animal cavities

it was recently proved that they prevent urogenital infections (UI) including recurrent infections of the urinary tract (UTI)

so dysbiosis or decrease of the lactobacilli generates several disorders and seems to facilitate the transmission of STDS 2.

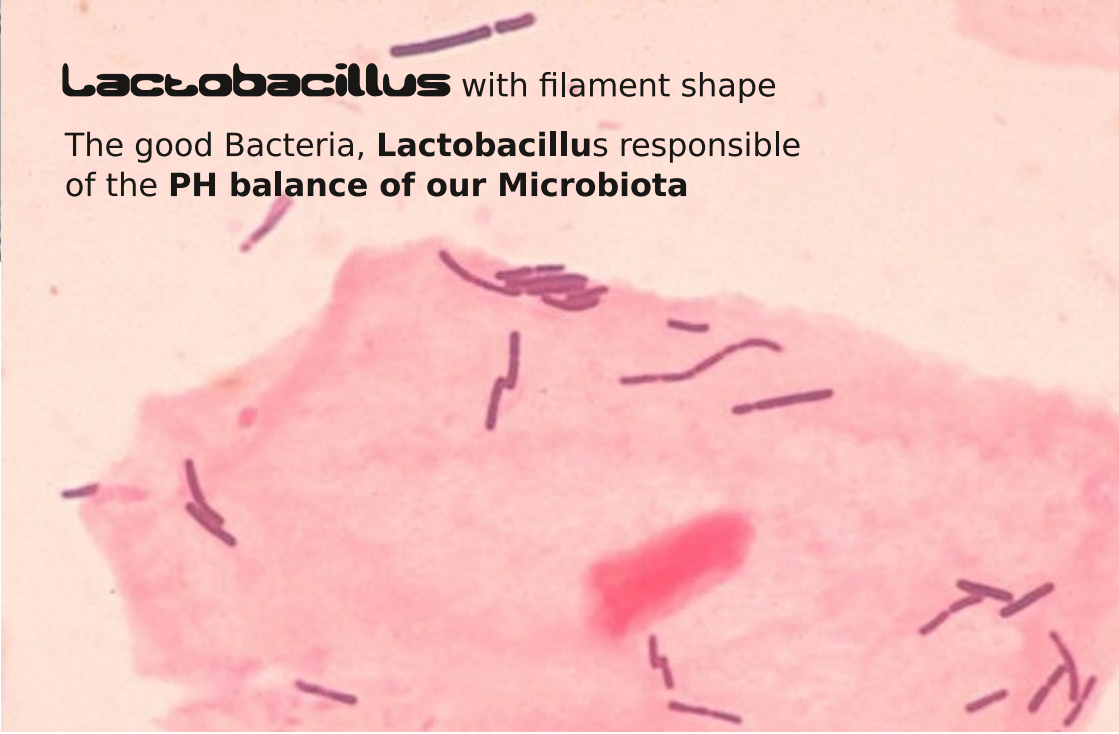
Gram positive (lacto bacillus)
gram negative pathogenic bacteria and fungi.



lactobacilus con forma de hilito

Lactobacillus with filament shape

The good Bacteria, **Lactobacillu**s responsible
of the **PH balance of our Microbiota**



BIOSENSING ~ BIOBEING ~ BIOFEELING

queer nature is the strangeness of the unknown causes just that: strangeness, we find it strange because we don't know it, it is not familiar, it falls outside the imposed norm, it needs to find a niche, it is queerized

the biobeing that keeps us "alive" is a complex ecosystem * links complex ecosystems
so complex that it seems we have simplified it to a normative bi.no.MYal, categorized and locked in a logic that flees from the strange only by **BIO.Being**

biobeing, sense, itching, bad smell, wound, permeable skin to feel research WITH science as the ability to perform reality * text

✡ ✡ WITCHY EQUIPMENT ~ HARDGLAM:

amplifying our visual feeling through the **micro.scope,** FOR A KIND OF GRASP OF WHAT WE CANNOT SEE WITH THE NAKED EYE BUT CAN FEEL THROUGH AND IN THE SKIN. AMPLIFYING, BIOFEELING AND DISCOVERING THE NUCLEI OF THE CELLULAR DANDERS THAT COMPOSE COMPLEX **biofeelings-** go to the root radicalize **to train complex Blofeelings for a constantly changing micro-macro world,**

feel and visualize your biota:
see your cells once with nucleus chloroplasts protozoa see your microorganisms move,.,.,.,.,. remain, complex beings and entities catabolizing chemical reactions, being micro, nano, molar, smell hormones while
we do not see them

I hope you enjoy these skills as much as I do, I thank anyone and everyone that has run into us, laying feelings and emotions across this extensive network of extrategies to resist the mainstream science and to let the experimental CONsciousness flow ...

THROUGH THE BIO.NIC EYE OF THE BIOTRANSLAB:

1. MYcroorganisms of the bio.ta or vaginal flora
2. Epithelial cells (shape, appearance) signs? signals?

VAGINITIS OR VAGINOSIS

vaginal infections and affections caused by microorganisms

HOW TO IDENTIFY WHICH MICROORGANISM

1. through the SENSES

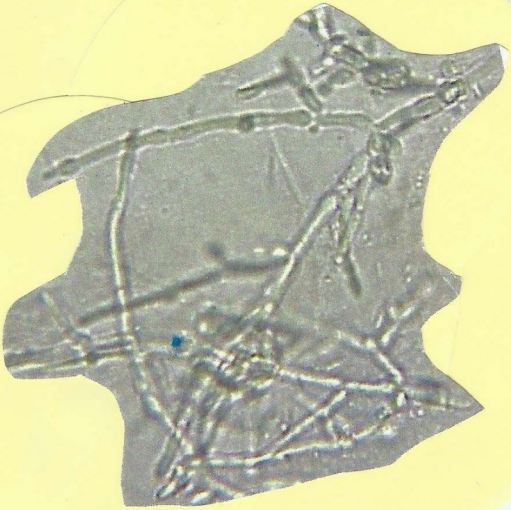
discomfort, burning sensation, bad smell, itching, redness

2. through the DIWO MICROSCOPE

(do it with others) (hazlo con otrxs)

HONGO

CANDIDA ALBICANS



MICROORGANISM FUNGUS CANDIDA ALBICANS

Pathogenic organism that usually appears when, due to the decrease of lactobacillus, pH becomes basic and destabilizes the vaginal flora. Most of times after taking antibiotics.

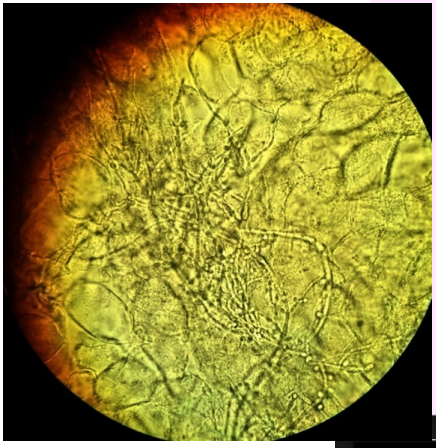
irritated red vulva
burning feeling
and
itching

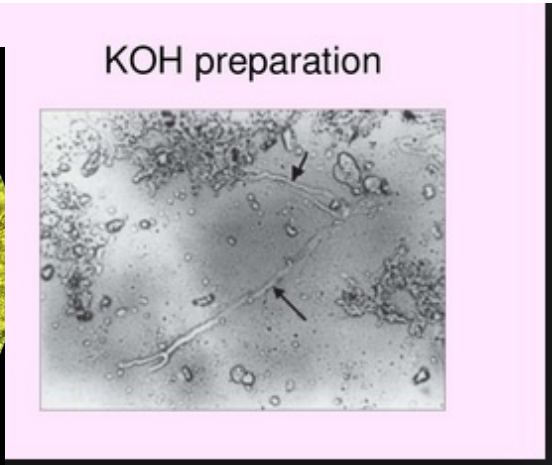
White dense flux

Through the BIO.nic eye

materials:
*microscope and glass plate
*KOH potassium hydroxide at 10% concentration
*cervical brush or ear swabs

how to proceed:
we insert the swab into the vagina and perform a scrape down the vaginal walls we wipe the stick on the glass plate and add a drop of KOH and wait for 10 minutes
we place the glass under the microscope
The KOH will cripple, break all the epithelial cells leaving the fungus Candida albicans intact.





Potions and elixirs

** **Natural Yogurt, unpasteurized,** meaning
it keeps alive the lactic bacteria that
produce lactic acid to balance on neutral the vagina PH.
*Vaginal ovules of calendula and witch-hazel from 5 to 7 nights
*Aloe ointment or oil.
*Garlic 1 in the morning and another 1 at night
Vaginal shower with sodium bicarbonate

PROTOZOO

PARASITIC PROTOZOA
TRICHOMONAS

Microorganism:
trichomonas

provoking:
yellowish flow
with bad smell

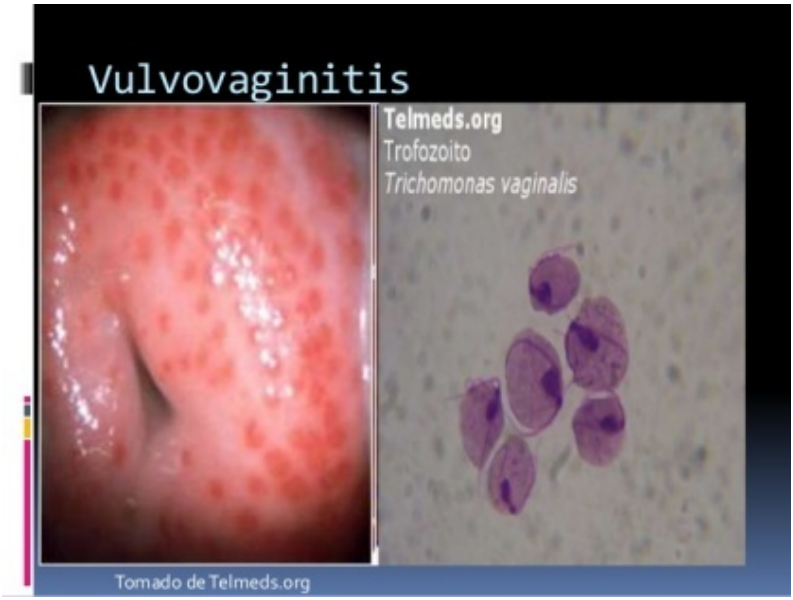
afection:
vaginal
trichomoniasis

inflamed vulva
with small red
dots
burning when
urinating

Through the BIO.nic eye

materials:
* microscope and glass plate
* cervical brush or ear swabs

how to proceed:
we **insert the swab into the vagina and perform a scrape down the vaginal walls**
we wipe the swab on the glass plate
place the glass under the microscope
Look for small flagella (filaments) with a wave-like motion



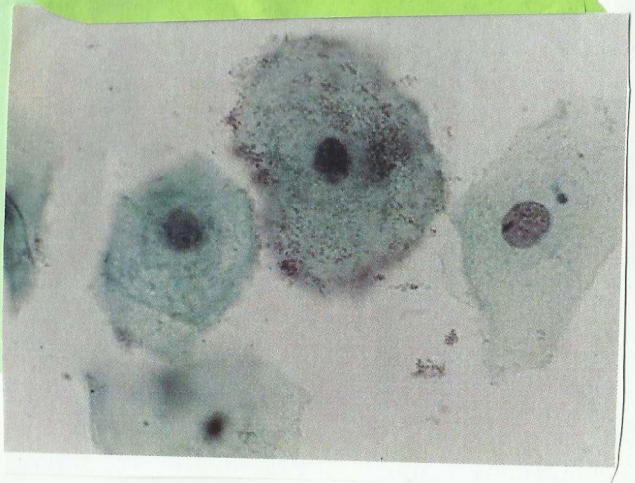
POTIONS AND CONCOCTIONS

** for the itch the recommendation is the same as for candidiasis, vaginal fungi &
*Garlic 1 in the morning and another 1 at night
*5CH or Sello de oro Hidrastis canadiensis super antibiotic root vaginal shower.

Same recommendations for Chlamydia

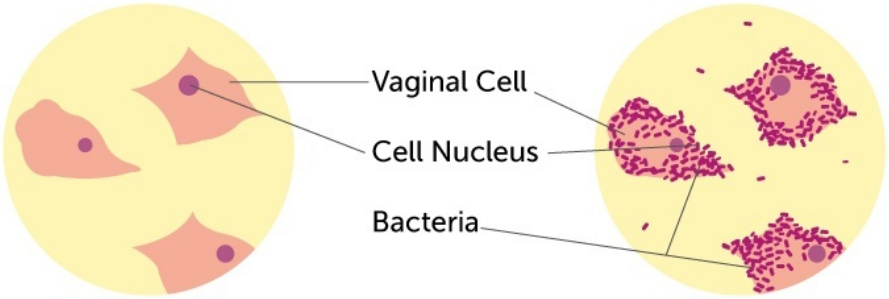
VAGINOSIS BACTERIANA

GARDENELLA



clue cells and positive "whiff" test.

clue cells son células epiteliales cubiertas por bacterias

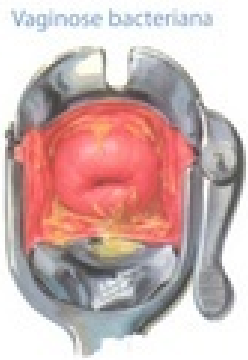


Normal vaginal cells seen under a microscope.

"Clue Cells", vaginal cells with bacteria stuck to them.

BACTERIAL VAGINOSIS GARDRNERELLA

clue cells and positive "whiff" test. clue cells are epithelial cells covered by bacteria pathogenic organism that usually **appears when, due to the decrease of lactobacillus**, the pH turns basic and goes from 4.5 to 5.5 destabilizing the vaginal flora.



provoking:
pale discharge
greyish tone
fish smell

Through the BIO.nic eye
materials:
*microscope and glass plate
*cervical brush or ear swabs

Potions and concoctions
* Acid showers twice a day together with lactobacilli (unpasteurized yogurt)

*5CH or Sello de oro Hidrastis canadiensis super antibiotic root vaginal shower
*calendula
*comfrey

ACCES

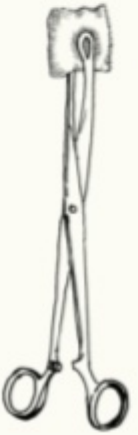
> eject
[Acid Acetic/
Vinegar test :
for cancer or pre-cancer

2- Hold a sterilized piece of gauze or cloth with a pair of forceps or long tweezers. You can also use a long swab if you have one.

3- Dip the gauze into plain white vinegar (any vinegar can work, as long as it has 4% to 5% acetic acid) and wet the cervix with the vinegar. Remove the gauze. The vinegar should not hurt the cervix but it may sting a little.

The vinegar test is a very simple way to check if the woman has abnormal cells on her cervix. Abnormal cells can be a sign of cancer or pre-cancer. HPV

1- Insert speculum and look



4- Wait for 1 minute. Look at the cervix again. If there are abnormal cells, **you will see white patches on the cervix.** (1A)
If white patches appear on the cervix, the woman needs care right away.

(1A) Potisitve vinegar test

If the white patches are not too large, they can be frozen and removed to prevent cancer.

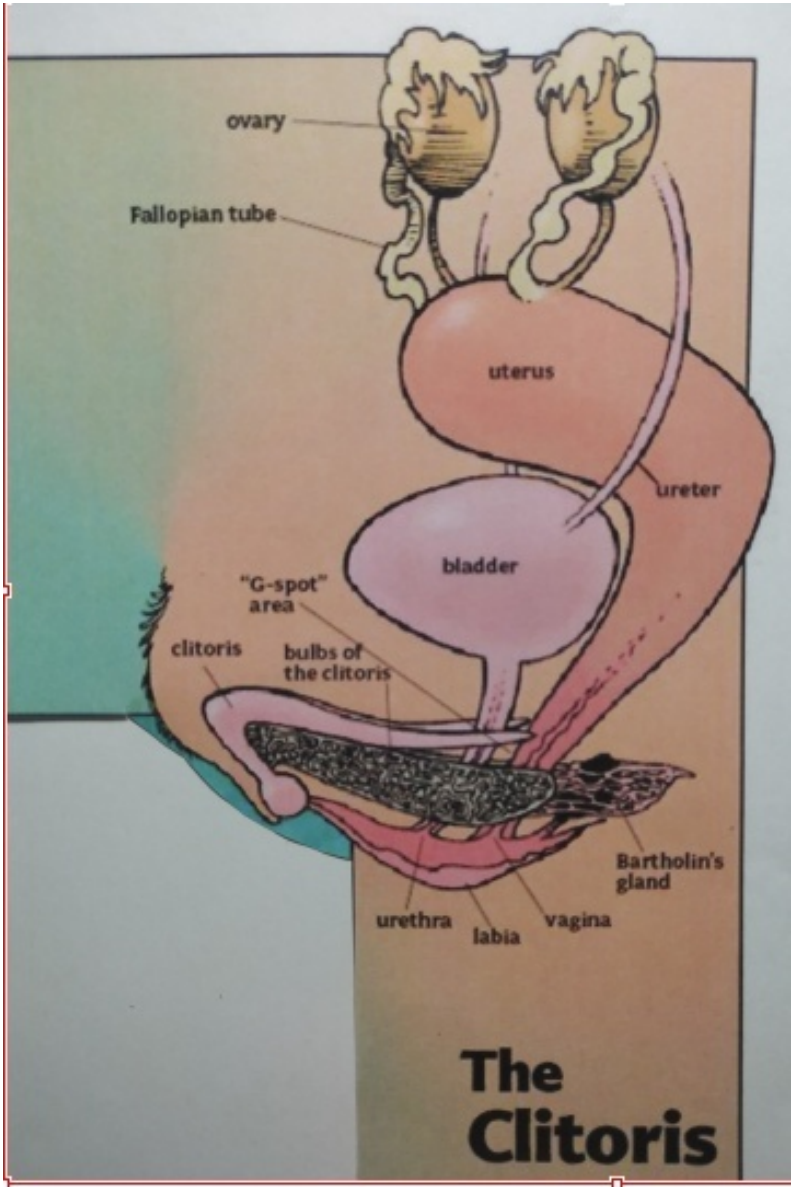
The woman can also have other tests to find out if she has cervical cancer or pre-cancer. You can save a woman's life by helping her get tested and treated early.

Negative vinegar test

Renaming of the female Glands by Klau Kinky from Gynepunk

Glandula de ANARCHA = eyaculatorial ó parauretral, before know as Skene Gland

Glandulas de LUCY & BETSY = lubricant or major



[[5]] CLITORIS

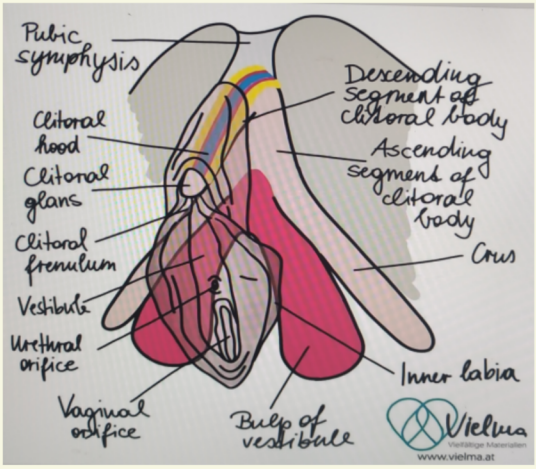
• Open Source Clitoris* :

Amy Stencel model and my own vagina anatomy draw on the left to Open the inner acces to internal anatomy

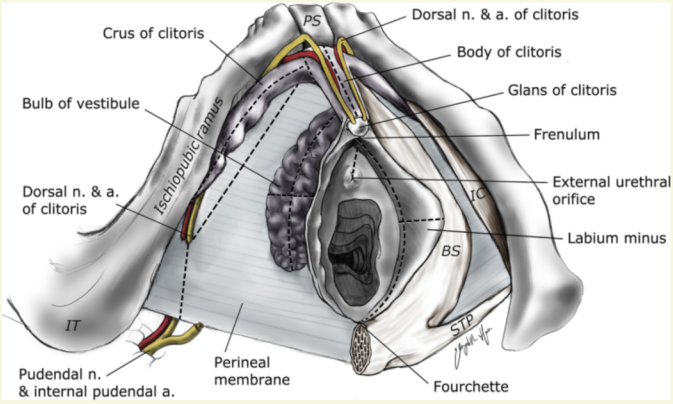
> select [conciousness// Open the anatomy/ Biotranslab installing AI [3d clitorial model] high resolution" model based on a research of other models but also on a deleted books

>>>>eject<<<<< searching for a better understanding of the pleasure organ

BIOtransLAB



missing data process, medical images were deleted from books since XIX century, here reclaming our organ and looking for justice in order to avoid any kind of ablation



Images : (1) Amy Stencell Yellow 3D model
(2) Paula Pin first draws on the anatomy of the vaginal and pelvic floor

One of the ideas behind disseminating and distributing the **HARDGLAM 3D clitoris** models is the re-creation of the diferent textures that are conected with the dynamic of the interaction between the five vascular compartments of the female external genitalia; in the clitoris, clitoral bulbs, labia minora, urethra, and vestibule/vagina and the body with the aims to clarify some important aspects of the anatomy and physiology of the female erectile organs and of the female orgasm, which are necessary for better (i.e., scientific) sex education and for female sexual dysfunction prevention.

This is an escalable model to ended up with a didactic model as an installation where the clitoris will be represented with different draws as an interactive installation that relates different ideas and creations, from different perspectives and as an interactive way of learning about ourselves.

We are lighting the clitoris as a political strategy to liberate womans not only because of pleasure fact but also because the "Female Genital Cutting" or "Female Circumcision."Although the practice predates the birth of Islam, it has taken on a dimension of the religion. It is, however, a practice that is performed across cultures and religions, and should not be considered to be strictly a religious practice, but also a cultural one.

This means that It’s not only erotic but political, as it is a tangible, palatable, symbol of female sexual power having also studies have even found a number of health associated with female ejaculate.

BIOTRANSLAB transhackfeminist laboratory that experiments with bio.electro.chemistry. Since 2012 they belong to the extensive Hackteria.org biohacking network. Their desire to generate open access to technologies has led them to carry out highly interdisciplinary workshops and research sessions.

They started as an open hardware electronics lab and have become part of the Bio/Chemistry part of a laboratory that builds replicable tools for self-governance, among others, of health. See tentacles BIOtransLab/bioautonomy and Gynepunk.
